

Introduction to Next-Generation Sequencing

DARRELL L. DINWIDDIE, PHD

DARYL B. DOMMAN, PHD

Instructors

▶ Darrell L. Dinwiddie, PhD

- ▶ PhD, Mechanisms of Innate Immune Evasion by Respiratory Viruses, University of New Mexico School of Medicine
- ▶ Post Doctoral Fellow, Human Genomics & Next-Generation Sequencing, National Center for Genome Resources
- ▶ Director of Lab Operations, Center for Pediatric Genomic Medicine, Children's Mercy Hospital
- ▶ Assistant Professor, Department of Pediatrics, University of New Mexico Health Sciences Center
- ▶ Co-Director, SARS-CoV-2 Genomic Surveillance Rocky Mountain Consortium & State of New Mexico

Instructors

▶ **Daryl B. Domman, PhD**

- ▶ **PhD, Microbiology, University of Vienna**
- ▶ **Postdoctoral Researcher, Wellcome Sanger Institute**
- ▶ **Reines Distinguished Postdoctoral Fellow, Los Alamos National Laboratory**
- ▶ **Assistant Professor, Department of Internal Medicine, Center for Public Health, University of New Mexico Health Sciences Center**
- ▶ **Co-Director, SARS-CoV-2 Genomic Surveillance Rocky Mountain Consortium & State of New Mexico**

Format

- ▶ **Tuesday, Tutorials, 90 minutes**
 - ▶ Lectures, Hands-on computer demonstrations
- ▶ **Thursday, Office Hours, 90 minutes**
 - ▶ Answer questions on previous tutorials
 - ▶ Both Dr. Dinwiddie & Dr. Domman will be present
- ▶ **14 Weeks**
 - ▶ February 15- May 19, 2022

Agenda- weeks 1-7

- ▶ **Week 1- Introduction to Next-Generation Sequencing- Dr. Dinwiddie**
- ▶ **Week 2- Good Laboratory Practices for NGS Processes- Dr. Dinwiddie**
- ▶ **Week 3- Introduction to NGS Data and File types- Dr. Domman**
- ▶ **Week 4- Introduction to working on the command line and virtual machine- Dr. Domman**
- ▶ **Week 5-Overview of laboratory protocols for pathogen sequencing- Dr. Dinwiddie**
- ▶ **Week 6- Short read mapping and calling variants against reference genome (SARS-CoV-2 focus) - Dr. Domman**
- ▶ **Week 7- Illumina based SARS-CoV-2 genome sequencing protocols- Dr. Dinwiddie**

Agenda- weeks 8-14

- ▶ **Week 8- Genome assemblies (bacterial focus)- Dr. Domman**
- ▶ **Week 9- Nanopore based SARS-CoV-2 genome sequencing protocols - Dr. Dinwiddie**
- ▶ **Week 10- How to create and interpret Phylogenies- Dr. Domman**
- ▶ **Week 11- Comparison of Sequencing Technologies for Pathogen Sequencing- Dr. Dinwiddie**
- ▶ **Week 12- Genomic epidemiology and Nextstrain pipeline Dr. Domman**
- ▶ **Week 13- NGS troubleshooting, common mistakes & solutions - Dr. Dinwiddie**
- ▶ **Week 14- Data dissemination to public/private data repositories. - Dr. Domman**

Major Learning Outcomes

- ▶ Understand the differences in sequencing technologies
- ▶ Theory of lab practices for sequencing library protocols
- ▶ Understand different file formats related to sequencing data
- ▶ Map sequencing reads to a reference genome and call variants
- ▶ Construct phylogenetic trees for inferring evolutionary history
- ▶ Identify genomic differences between pathogens

Introduction to Next-Generation Sequencing

Contents

- ▶ **Introduction to Next-Generation Sequencing**
- ▶ **Illumina**
 - ▶ DNA library prep
 - ▶ RNA library prep
 - ▶ Cluster generation
 - ▶ Sequencing
- ▶ **Oxford Nanopore Technologies**
 - ▶ DNA library prep
 - ▶ RNA library prep
 - ▶ Sequencing

Next-Generation Sequencing

- ▶ Describes a variety of newer sequencing methods that are able to sequence samples in a massively parallel manner and much lower cost.
- ▶ Some error rates of NGS can be higher than Sanger sequencing, but increased depth of coverage of sequence improves consensus accuracy.
- ▶ May require large computer resources for analysis and interpretation.

NGS Systems

Current Systems

- ▶ **Illumina**
 - ▶ iSeq
 - ▶ MiniSeq
 - ▶ MiSeq
 - ▶ NextSeq 550
 - ▶ NextSeq 1000, 2000
 - ▶ NovaSeq
- ▶ **Life Technologies/ ThermoFisher**
 - ▶ Ion Torrent S5
 - ▶ Genexus
- ▶ **Pacific Biosciences**
 - ▶ RS II
 - ▶ Sequel
- ▶ **Oxford Nanopore**
 - ▶ MinION
 - ▶ GridION
 - ▶ PromethION

Obsolete Systems

- ▶ **Polonator**
- ▶ **Helicos**
- ▶ **Life Technologies SOLiD 3, 4 & 5500**
- ▶ **Roche 454**
- ▶ **Complete Genomics**
- ▶ **Illumina**
 - ▶ GA IIx
 - ▶ NextSeq 500/550
 - ▶ HiSeq 2500, 3000, 4000
 - ▶ X Five & X Ten
- ▶ **Life Technologies/ ThermoFisher Ion Torrent**
 - ▶ PGM
 - ▶ Proton

Types of Next Generation Sequencing

- ▶ **DNA**
 - ▶ Human, animal, microbes, etc.
 - ▶ Metagenomic
- ▶ **RNA-seq (mRNA, ncRNA)**
 - ▶ Poly-A selection
 - ▶ Ribosome depletion, includes non-coding RNA
 - ▶ Targeted enrichment
- ▶ **Single Cell**
- ▶ **Amplicon**
 - ▶ DNA or cDNA
- ▶ **Directional RNA**
 - ▶ Maintains strand information (sense vs antisense)
- ▶ **ChIP-seq**
 - ▶ Chromatin immunoprecipitation
- ▶ **Methyl-seq**
 - ▶ Bisulfite treatment
 - ▶ Direct detection of modifications (PacBio)
- ▶ **Small RNA (miRNA)**

Types of Next Generation Sequencing

- ▶ **Single end**
 - ▶ Sequence from one end of DNA
 - ▶ Read lengths vary from 1x 36 bp to >1x 25,000 bp
- ▶ **Paired-end**
 - ▶ Sequences from both sides of the DNA insert, 2x 50 bp to 2x 300 bp
- ▶ **Multiplexed**
 - ▶ Can sequence multiple samples together (multiplex)
- ▶ **Mate- Paired**
 - ▶ Long-insert, paired-end (Illumina)

Comparison to Sanger Sequencing

Sanger Sequencing

Next-Generation Sequencing

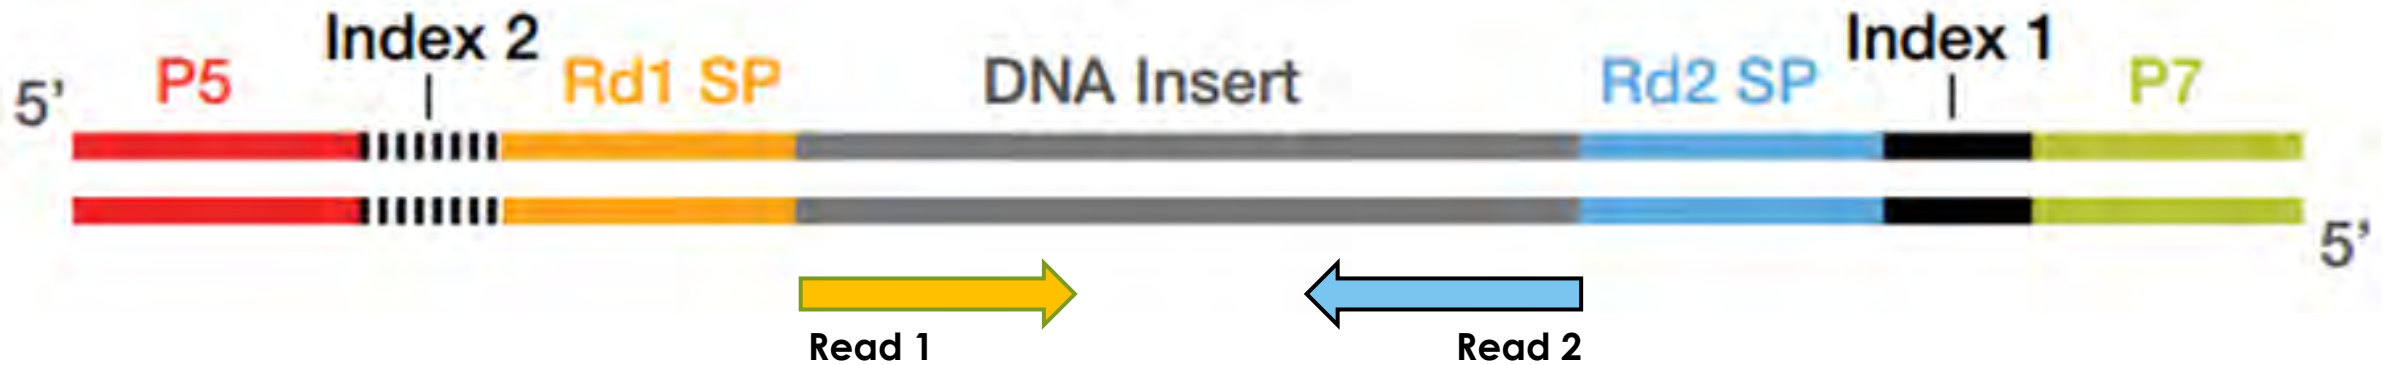

Illumina Next-Generation Sequencing

Definitions

- ▶ **Library**
 - ▶ Completed sample, prepped and ready for sequencing. Includes two adapters and one or more indexes.
- ▶ **Insert**
 - ▶ Nucleic acid (DNA, cDNA) between Illumina adapters that can be sequenced.
 - ▶ The size of DNA library, can describe just the length of DNA or DNA + Adapters (~135 bp)
- ▶ **Adapter**
 - ▶ Specific DNA sequence added during library prep that enables DNA to attach to flowcell, includes sequence primer binding site, indexes. Illumina refers to them as P5 and P7.
- ▶ **Index/barcode**
 - ▶ Unique sequence (single or dual) that allows multiple samples to be sequenced together. Illumina refers to them as i5 & i7.
- ▶ **Flowcell**
 - ▶ Oligo-coated slide/cassette that library is hybridized to and in which sequencing reactions occur.

Illumina Library Structure

Rd1 SP- Read 1 Sequencing Primer
Rd2 SP- Read 2 Sequencing Primer

Single Index/barcode

Illumina DNA Library Prep- Tagmentation

DNA binding & Normalization

Tagmentation is a method that uses a bead-linked transposome (BLT) to fragment dsDNA & insert part of the Illumina adapter sequence.

IDT for Illumina UD Indexes (Primers)

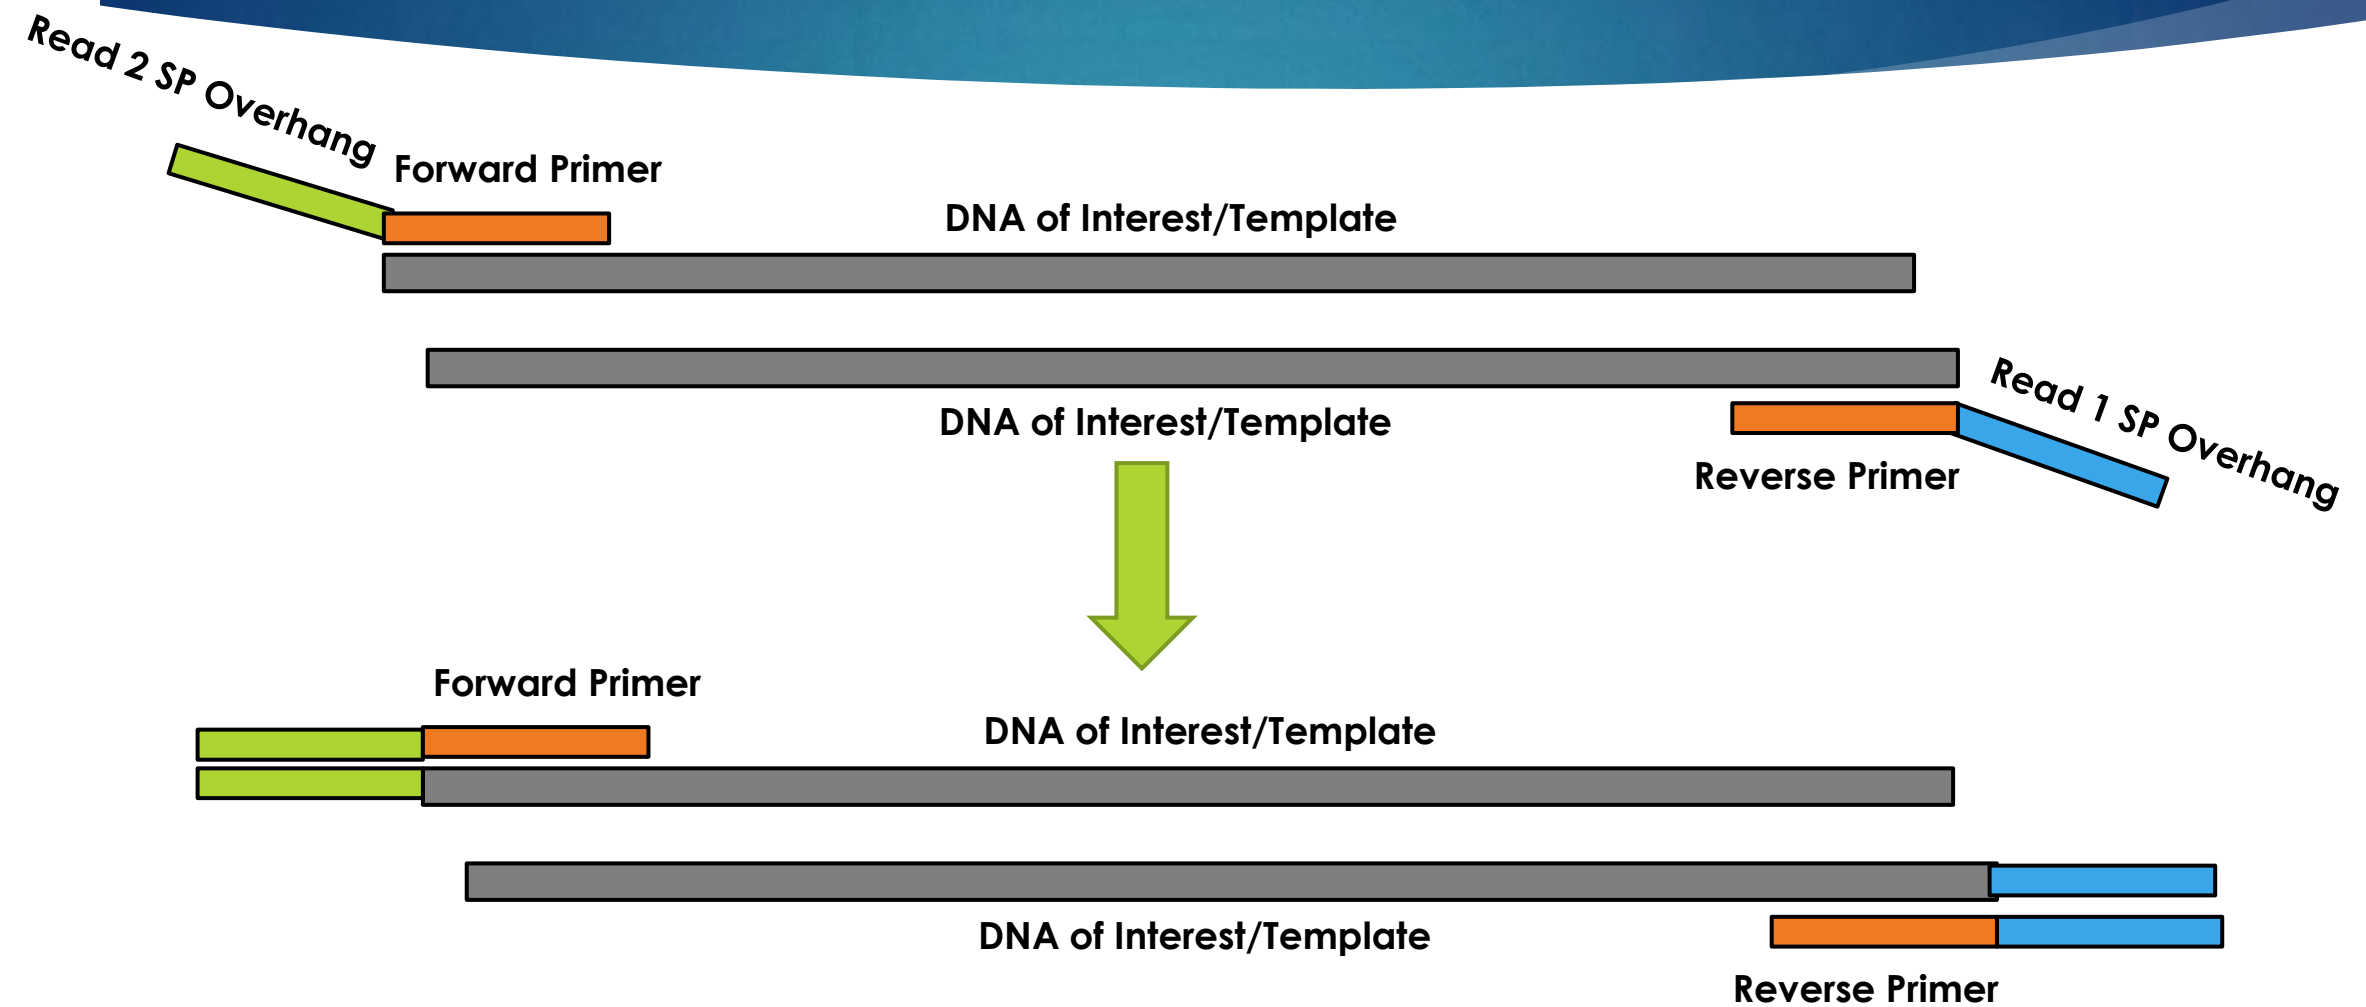

PCR

Completed Library

Illumina Library Prep- RNA

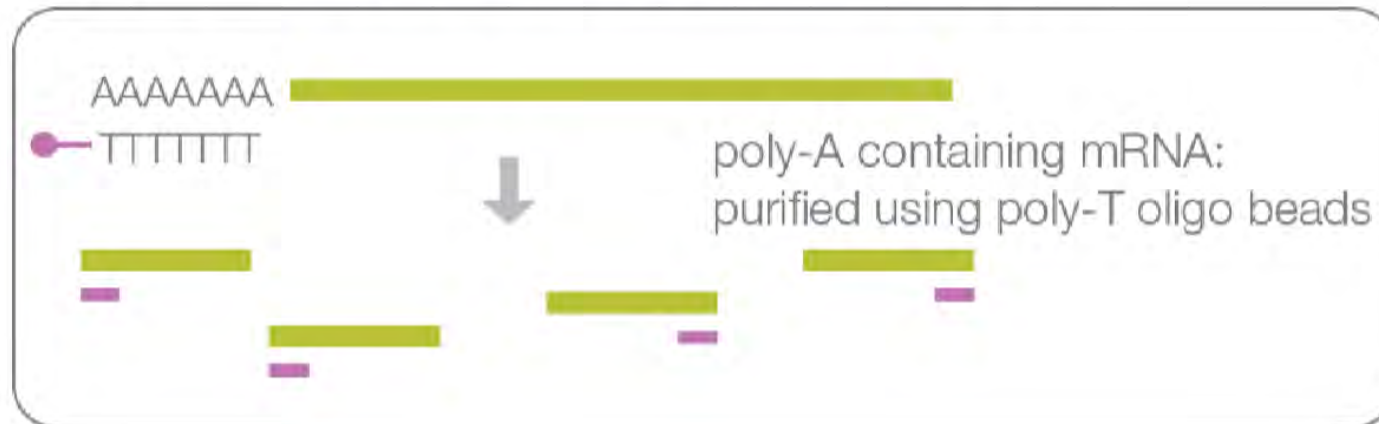

- ▶ Typically lower starting concentration as compared to DNA library prep
 - ▶ Ligation protocols use lower concentration of adapters to avoid adapter-dimers
- ▶ Need to remove rRNA
 - ▶ Poly-A selection
 - ▶ High quality RNA
 - ▶ mRNA (RNA must be poly-Adenylated)
 - ▶ rRNA depletion
 - ▶ Degraded RNA
 - ▶ Total RNA

Illumina Stranded RNA Library Prep- mRNA

Purify and Fragment mRNA

The Poly-A containing mRNA molecules are purified using poly-T oligo attached magnetic beads. Following purification, the mRNA is fragmented into small pieces using divalent cations under elevated temperature.

Figure 1 Purifying and Fragmenting mRNA

Illumina Stranded RNA Library Prep- mRNA

Synthesize First Strand cDNA

Cleaved RNA fragments are copied into first strand cDNA using reverse transcriptase and random primers. Adding Actinomycin D to FSA (First Strand Synthesis Act D mix) prevents spurious DNA-dependent synthesis, while allowing RNA-dependent synthesis, improving strand specificity.

Figure 2 Synthesizing First Strand cDNA

Illumina Stranded RNA Library Prep- mRNA

Synthesize Second Strand cDNA

Strand specificity is achieved by replacing dTTP with dUTP in the SMM (Second Strand Marking Mix), followed by second strand cDNA synthesis using DNA Polymerase I and RNase H. The incorporation of dUTP in second strand synthesis quenches the second strand during amplification.

PCR

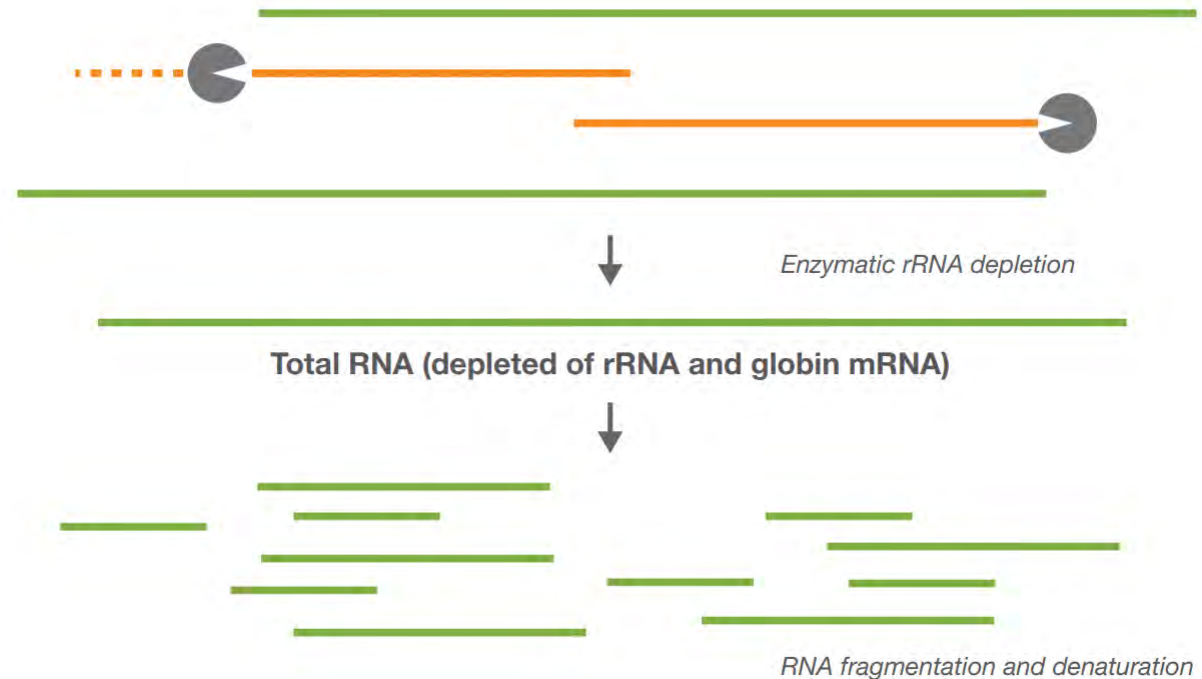

**Number of PCR cycles is dependent on starting RNA concentration.
Lower concentration = More cycles**

Illumina Stranded Total RNA Prep, Ligation with Ribo-Zero Plus

Illumina Stranded Total RNA Prep with Ribo-Zero Plus

- 7 hours
- 1 rRNA depletion
Single-tube, enzymatic reaction
 - 2 RNA fragmentation
and denaturation
 - 3 cDNA synthesis
Integrated with library prep kit
 - 4 A-tailing
 - 5 Ligation
Improved ligation-based chemistry
 - 6 PCR amplification
 - 7 Quantification and
normalization
 - 8 Ready for sequencing

Illumina Stranded Total RNA Prep, Ligation with Ribo-Zero Plus

1 Deplete Ribosomal RNA
Hands-on: 45 minutes
Total: 1 hour 49 minutes
Reagents: 80% EtOH, DB1, DP1, ELB, PRB, PRE, RDB, RDE, RNAClean XP

2 Fragment and Denature RNA
Hands-on: 2 minutes
Total: 7 minutes
Reagents: EPH3

3 Synthesize First Strand cDNA
Hands-on: 5 minutes
Total: 50 minutes
Reagents: FSA, RVT

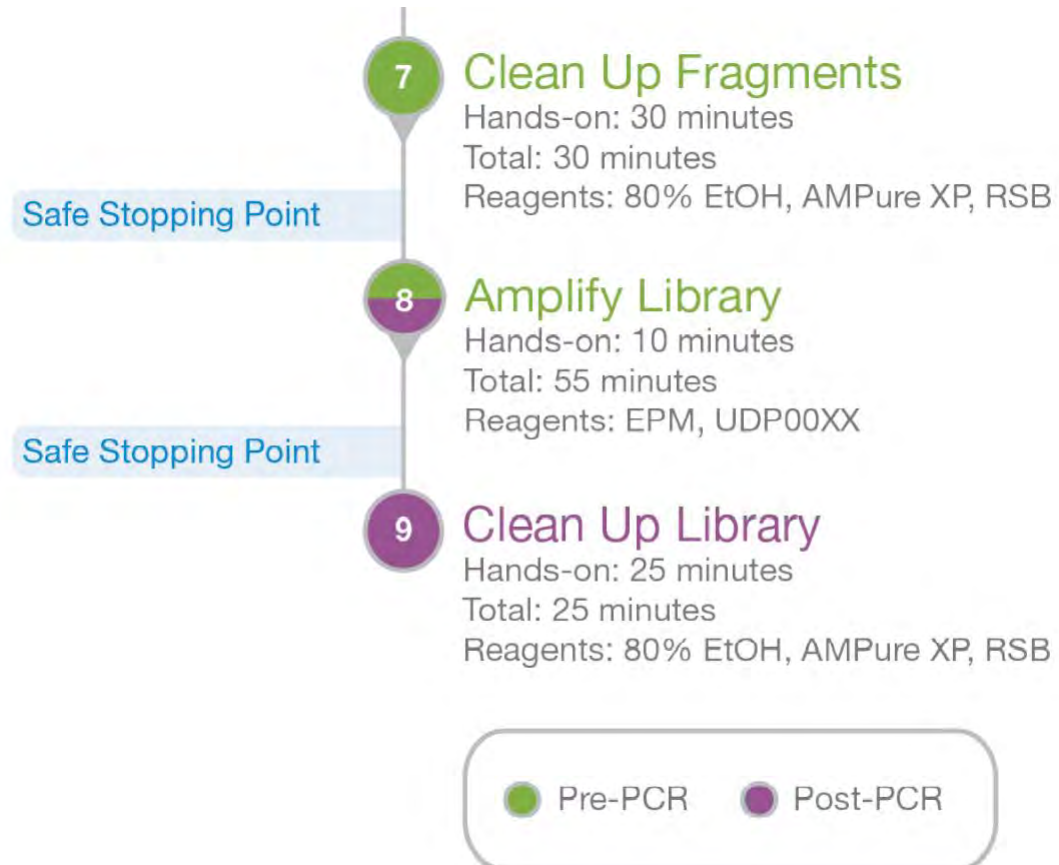

Safe Stopping Point

4 Synthesize Second Strand cDNA
Hands-on: 35 minutes
Total: 1 hour 40 minutes
Reagents: 80% EtOH, AMPure XP, RSB, SMM

5 Adenylate 3' Ends
Hands-on: 5 minutes
Total: 45 minutes
Reagents: ATL4

6 Ligate Anchors
Hands-on: 10 minutes
Total: 25 minutes
Reagents: LIGX, RNA Index Anchors, RSB, STL

Summary

- ▶ **Next-Generation Sequencing (NGS) describes a variety of technologies that are able to sequencing in a massively parallel manner.**
- ▶ **Library preps are similar across NGS technologies.**
 - ▶ **Ligation-based: fragment, end repair, A-Tail, Ligation of Adapters, PCR**
 - ▶ **Transposase-based: Enzymatic fragmentation coupled with addition of part or all of adapter**
- ▶ **Choice of library prep depends on sample type, sequencing method, and desired data output.**
